

GLUE-IT FRONT

The screen always with you!

Glue It Front is the film by Screenline designed to simplify the use of latest generation and traditional interactive projectors, making it possible to place the screen on any flat surface without having to resort to the classic "white wall" which debases the projection and makes interactive technology (electronic pens for writing) difficult to use.

The screen is made of a white self-adhesive diffusion PVC foil for front-projection with a non glare embossed surface with a high sliding coefficient. In this way, it is possible to obtain perfect projections from data and video sources, enabling the use of optical interactive pens thanks to the high sliding typical of interactive boards (LIM).

Its high brightness enables well detailed images and makes projecting possible even in well lit environments.

The dotted sticker has no negative effect on the projection and allows quick application on different types of surfaces, no matter what the underlying material is (plaster, wood, laminated, etc.).

Ideal for classrooms and conference rooms, it is easy and quick to install. Moreover Glue It Front is washable and can easily be removed and reused.

Technical details

Features

- Quick and easy installation (Pic. 1-4)
- Possibility of numberless attachments and removals, washable (Pic. 6-8)
- Self-adhesive diffusion PVC foil for front-projection
- Non glare, embossed surface
- It sticks to different types of surfaces (plaster, wood, laminated, etc.)
- Applications: classrooms, conference rooms, etc.
- The dotted sticker prevents the creation of bubbles on the projection surface.

Technical specifications

- Gain: 1.0
- Vision angle: Hor 90 - Vert 100°
- Weight: 145g/sqm
- Thickness: 140µ
