

Wave Multifomat

The screen that multiplies for you.

With the new multifomat screen technology it is possible to obtain up to 8 different video formats by simply activating the remote control provided. The new motors, featuring an inbuilt encoder each and a dedicated electronic control unit, independently operate the movement of the two fabrics. They are activated by the radio frequency remote control but also by any home automation system commercially available. Programming the unit permits the lowering or the lifting of the screen and the adjustment of the formats at will with 5 cm precision. **In WAVE MULTIFORMAT the rollers are placed vertically - motors and fabrics are stacked -, thus giving the box an innovative design with a soft and supple line.** The shape of the box conceals the rear anchor brackets completely. The flat upper part of the box makes it possible to place the frontal satellites of the audio equipment instead of having to fix them to the wall, while in the special groove in the rear part of the box it is possible to keep the audio cables of the loudspeakers out of sight. The screen can be provided with a back lighting system made of an RGB LED stripe placed inside a downward oriented groove which projects light on the wall behind the fabric. Connected to a home automation system, it becomes a light source which transforms the environment according to the colour and intensity chosen.

Technical details

Screen characteristics

- double motorization with inbuilt encoders
- up to 8 customized formats, five of which preset
- possibility to interface with a home automation control system through door RS485
- infra-red remote control included
- round-shaped box with 90° rear angle for better ceiling installation
- hidden fixing brackets
- seamless tensioned fabric
- flat upper surface to place L-C-R loudspeakers
- prearranged groove for audio cables
- RGB LED back lighting compatible with all home automation control systems (on request)
- front surface drop to improve flatness
- motors on the right side
- particularly silent motor available on request up to 300 cm base

Available fabrics

- Home Vision
- Grey High Contrast
- Microperforated
- Coral retro-projection
